## Career Objective

---

Motivated Web Developer seeking to grow my career in a dynamic organization where I can contribute to real-world projects, strengthen my technical expertise, and gain valuable professional experience through continuous learning and collaboration.

## Technical Skills

---

- **Frontend:** HTML5, CSS3, JavaScript, React.js, Redux, Tailwind CSS
- **Backend:** Python, Django, Django REST Framework (DRF), Fastapi
- **Databases:** PostgreSQL, Chroma db
- **Tools & Deployment:** Git, GitHub, Docker, Celery, Redis, REST APIs, Vercel, Render

## Professional Experience

---

### Full-Stack Developer Intern, *Bridgeon Solution LLP*

- Collaborated on the end-to-end development of full-stack web applications.
- Built and maintained responsive, high-performance user interfaces.
- Designed and implemented server-side logic and API architectures.
- Managed database schema design and optimized data retrieval processes.
- Streamlined application state management for improved user experience.
- Tested and fixed bugs to make sure applications worked smoothly.

## Project

---

### Smart Hiring Management System (In Progress), *React | Django | Fastapi | Django Channels | Redis | Docker*

I am currently developing a smart hiring management system designed to streamline the recruitment process. The project features a real-time chat and notification service built with Django Channels and Redis, allowing users to communicate instantly. To ensure the application remains fast and reliable, I am using background task processing for heavy workloads and organizing the system into independent microservices. The architecture also incorporates cloud-based messaging and automated functions to handle specific tasks efficiently, all managed within a containerized environment using Docker.

### E-Commerce Store – Full-Stack Project, *React | Django REST Framework | PostgreSQL*

I developed a full-stack e-commerce platform featuring a secure user authentication system with email-based verification. The project includes a seamless checkout experience by integrating a professional payment gateway for safe online transactions. I built and connected a robust API to ensure the frontend and backend communicate efficiently, and I managed the full deployment process by hosting the application on cloud platforms for public access.

### Student Management System, *Django | PostgreSQL*

I built a focused backend project to manage student enrollments and course data. The system allows users to view available courses and enroll digitally, utilizing a structured database to keep student records organized. This project helped me master fundamental backend flow, including how to handle user requests, manage data relationships, and present dynamic information using the Django framework.

## Education

---

**Higher Secondary Certificate**, *Government Higher Secondary School, Pookkottur*  
Percentage: 83% (State Board)

2023 – 2025  
Kerala

## Languages
